

Sprint 4 Retrospective

Overview

The purpose of this sprint retrospective is to evaluate what has been worked on and identify areas for improvement to achieve the team's goals for Release 2. The main objectives of Sprint 4 were to complete the critical backend functions and enhance the application's UI by implementing user direction to each associative building of the campus. Additionally, we focused on improving code quality through testing, UI mock-ups and documentation, which helped in bug detection and the overall system maintenance. Conversely, usability testing was introduced to test the application to users. This will allow the user to give feedback to the application. Overall, Sprint 4 was successful in improving testing, documentation, and feature development.

Date	Sunday, 9 March 2025
Team	Bulat-and-Friends
Participants	Marc-Yves Malchev - 40265238 Ryad Alla - 40227731 Joseph Aladas - 40156616 Alimurat Dinc Donmez - 40245310 Nektarios Zampetoulakis - 40211948 Azmi Abidi - 40248132 Bulat Abdullin - 40264963 Alessandro Tiseo - 40262416 Abdullah Taha - 40261146

Retrospective

Start Doing	Stop Doing	Keep Doing
Allow for peer reviews at the start of implementation.	Stop hard-coding values rather than implementing the necessary UI function.	Each meeting should have well-defined goals for each group member.
Improve on the commit comments by increasing the clarity.	Stop delaying code reviews. (Perform code reviews at a more efficient level.)	Keep testing the code for each commit.
Create reusable code that can be reused in different locations of the application.	Stop making one large commit, rather divide the commit for each issue separately.	Keep doing code reviews and writing significant documentation.
Start coding in pairs with different members of the team.	Stop coding in pairs with the same member of the team.	Address important problems early and separate tasks accordingly.
Increase team communication between different parts of the development. (Ex.: Backend Team working with Frontend Team)	Stop working alone and focus more on sharing knowledge with other group members.	Write crucial test cases that test important functionality.

Action Items

1. Add Indoor Navigation & Navigation between SGW and LOY campuses & the shortest path.
2. Incorporate Multi-Floor Navigation with the different Campuses.
3. Connect User Calendar.
4. Implement the User Calendar to determine the next location of the class.
